

KCMAPT

Kansas City Metro Association of Permit Technicians

2010 FALL TRAINING SESSION

Green Building Code / Energy Efficiency

This seminar introduces participants to the proposed Green Building Code. An overview of the proposed code will be given and time will be allotted to discuss energy efficiency and how it plays a part in the green code. Information presented will help give participants insight as to what to expect with the green building codes when designing, reviewing plans, and inspecting for compliance with green building requirements.

Over The Counter Permits and Plan Review

This seminar will help those at the counter as well as behind the scenes have a general idea of code requirements for permits that could be issued 'over the counter'. Attendees will walk away with a general grasp of what documents are required, general code requirements and other knowledge that will be helpful to those that are front line and those that are performing plan reviews. A general review of plans and symbols used on designed drawings will be included with the session.

The Kansas City Metro Association of Permit Technicians invites you to attend the fall 2010 training opportunity.

*Thursday, September 9
8:30am – 5pm*

Hosted by:
City of Lee's Summit
